This project consisted of grading, drainage, aggregate base, and asphalt surfacing of approximately 2 miles of roadway and also included curve realignments, a new bridge structure, wetland mitigation, excavation, and drainage improvements. Final design services and construction contracting, as well as onsite stewardship and oversight were administered by CFLHD.

Through successful collaboration between CFLHD, NMDOT, and the contractor, the project delivery schedule was accelerated by utilizing on-site earthwork that resulted in a time savings of 15 percent.
