### Construction Activities

Work at Forest Service Road (FSR) 5008-100 MP 0.75 will continue next week. The middle and outlet sections of the pipe culvert are now installed. To complete the installation of the inlet section, traffic at the site is now being routed to the south over newly installed middle and outlet sections. Please use caution when going through the site due to the shift in the roadway. Excavation and backfill work is expected to be completed next week on the inlet section. Closures at this site will continue to follow the schedule shown below and to the right.

Next week at FSR 5140 MP 8.75 work will focus on the ditch reconditioning. Also, next week at FSR 5140 MP 10.2, work will continue on the installation of the 144-inch pipe culvert. Do to some issues being faced at the MP 10.2 site, the installation of 144-inch pipe culvert is taking longer than originally anticipated. It is expected that the pipe culvert will be fully placed in the excavation by the first part of next week, with backfilling starting later in the week. FSR 5140 will remain closed to public traffic until the work at MP 8.75 and MP 10.2 is completed.

Work at FSR 4150 MP 0.3 and MP 2.2 is excepted to resume the middle of August. During this work closures will follow the schedule shown to the right.

Work at FSR 4010-050 MP 0.78 and MP 2.3 is excepted to start the middle of August. During this work FSR 4010-050 will be closed to public traffic.

Please, if the closed signs are up, stay out of the work area. Also, use caution on roads nearby these sites, as there will be increased traffic related to work activities.
